The American Book of the Dead
&
The Big Bloody Book of English (development)

GLOSSARY

BS: 1. commonly accepted acronym for **B**ull **S**hit
2. yet to be commonly accepted acronym for **B**elief **S**ystem

CCSS: truncated acronym for the **C**onstant **C**omparison of **S**ubjective **S**tates to "**O**bjective **Conditions**" **T**hat **M**ay or **M**ay **N**ot **E**xist **A**nywhere **O**utside of the **O**bjective **O**ffsetter's **M**ind

CCSS is the baseline, default reflective algorithm for the unoccupied modern mind and consists of the **CCSS** enthusiast comparing their individual subjective state(s) of being to their ***equally*** **subjective impression** of objective realities external to the reflective individual who is under the (mistaken) impression that their **subjective impressions** of **objective realities** are the ***same thing*** as those objective realities.

See ***objective offset***

Concussion: 1. any impact induced injury to the brain caused by the external application of blunt force trauma to the cranium, skull and/or head area.

2. antonym of 'discussion': one or more related statements that reveals or indicates a previously unknown (to the listener/reader) self-evident truth that can not be empirically disproven, only rejected to existential conflicts with pre-existing Belief Systems (BS).

Demonic Transference: a historically popular political rhetoric tactic wherein a motivational speaker re-contextualizes the pre-existing, self directed (often with cause) negative emotions of a given audience and rhetorically re-directs those unwanted or uncomfortable feelings (no matter how accurate) towards one or more groups of people who are demographically defined as group due to shared possession of one or more traits that they have no conscious control over.

Example: The 2016 American presidential election

Genetic Drift: the cumulative genetic changes and mutations that develop within a smaller and/or isolated breeding population kept separate from large breeding groups (and/or general population).

If allowed to develop for long enough, genetic drift is the process that results in the creation of a new sub-species or species over time.

GOLD **fever**: thought to be rooted in the Neuro-Chromatic Banana Response (NCBR) common to all primates, ***GOLD*** **fever** is a virulent, genetically predisposed multivalent addictive behavioral disorder nearly universal in *homo sapiens* that is centered on the substance (or just the idea) of ***GOLD****.*

See NCBR and/or ***MONEY*** **madness.**

Ground State:

1. the panicky, ass clenching state of enhanced anxiety that an arboreal primate experiences when they find themselves at ground level due to accident or circumstance.

2. the panicky ass clenching state of enhanced anxiety that most primates (including *homo sapiens)* experience when encountering a situation that is divergent to previous expectations or a habitat that is divergent to previous evolutionary optimization.

HEIL: acronym for **H**eight **E**nhancing **I**nferential **L**egwork: a widely popular English conversational tactic where the rhetorical height of a speaker is proportionally enhanced by cutting anyone (often 3rd parties not directly involved in the conversation) off at the knees who doesn't agree with the speaker, or the speaker simply doesn't like.

This rhetorical gambit often first appears in conversation as stage 3 of the Standard English Introductory Gambit (SEIG).

See **SEIG**

Inverse Alchemy: an all too common historical trend where the empirical discoveries of earlier generations originally intended for the betterment of humankind at large are hijacked by later generations and repurposed to enrich an elite minority (who often already have more money than they can spend in their lifetime) by **literally** any means possible.

Historical examples, the development of gunpowder, fractional reserve banking and modern democracy.

Linguistic drift: the cumulative lexical deformations, colloquialisms and regional mispronunciations that develop over time within a culturally isolated group separated (often due to geography) from the main body of a language's speakers.

If left to develop for long enough, linguistic drift is the development process that results in formation of new dialects and/or languages.

***MONEY* madness:** the greatly potentiated modern extension of ***GOLD* fever** that has spread to pandemic levels around the world.

See: ***GOLD* fever**

NCBR: acronym for **N**euro-**C**hromatic **B**anana **R**esponse: a chromatically triggered multivalent neuro-behavioral predisposition nearly universal among Terran primates (including *homo sapiens)* associated with the color yellow (or ***GOLD****)* entering an individual's visual field.

NCEE: acronym for **N**euro-**C**ognitive **E**vent **E**scalation: the multistage process of how the subjective impression of neuro-cognitive events (IE thoughts and feelings) are magnified (or escalated) by the words that we use to describe them to ourselves or others.

No Ego-Ego Trip: a common state of cognitive dissonance wherein a metaphysical and/or religious enthusiast errantly concludes that their enhanced piety or selfless humility means they are somehow "better" than all who do not share their beliefs, and often most of those who do.

Objective Offset: The central praxis of modern English wherein the English language enthusiast can (and does) imply their responsibility for "good" objective developments OR minimize their responsibility for "bad" objective development through the strategic selection of which pronoun (either the subjective "I" or the objective "me" is used to describe those objective developments to interested parties.

Examples:
"**I** am the heavyweight champion of the world."
"Now look at what you made **me** do."

Q: the standard designation for the combined parameters of frequency center and frequency spread (or range) for the increase or decrease of amplitude (IE audible volume) in an audio parametric filter or envelope filter (widely referred as the "auto wah" audio effect).

REVERSE EUGENICS: the (often accidental) science of diminishing otherwise desirable traits within a stable breeding population through selective not-breeding (typically facilitated by the strategic **elimination** of the best and brightest in the local gene pool) and not-very-selective breeding among the surviving drones and rat assed layabouts.

S.**C**.**R**.**E**.**E**.**D**.: 1. acronym for **S**elect **C**omments **R**egarding **E**ndemic **E**nglish **D**eficiencies.
2: acronym for **S**currilous **C**omments **R**evealing **E**xtreme **E**nglish **D**ifficulties.

SIEG: acronym for **S**tandard **I**ntroductory **E**nglish **G**ambit: the standard non-hostile greeting algorithm universal to all English speaking primates irrespective of origin, situation, or nature of the relationship between two or more English speakers.

See **HEIL**

SINF: acronym for **S**tandard **I**ssue **N**orwegian **F**isherman

SISF: acronym for **S**tandard **I**ssue **S**wedish **F**armer

SPGR: acronym for **S**tandard **P**rimate **G**orilla **R**esponse: the standard primate response to encountering an even larger primate, typified by the fear inspired evacuation of the smaller primate's bowels while running as fast as possible in the direction most likely to create maximum distance between the smaller primate and gorilla.

Suppository:

1. (noun) a small piece of solid medicine that is placed in the rectum (or vagina) and left to dissolve. (courtesy of Merriam-Webster)

2. (adjective) alternate form of the word "suppositional".

3. *(nounjective)* those hypothetical, conjectural and/or suppositional statements which reveal or indicate the overall degree and depth a speaker's head is up their own ass.

Xanthic: (adjective)

1. of or relating to a yellow or yellowing color.

2. of or derived from xanthine or xanthic acid. (courtesy of ***dictionary.com***)
